ADAM GUEST

MAKING SOFTWARE BETTER

I architect, build, and deliver software solutions that are usable, maintainable and effective. I help developers use their skills and learn new ones to enable them to produce better software more effectively.

Software development can be better, and I love to explore new and different ways to develop software that allow for faster feedback, greater robustness, and improved capacity to meet the needs of users. Whether through exploring new programming languages and technologies or by improving processes and ways of working to gain a greater connection to users and a sharper focus on quality, I find it exciting to discover the ways that we can be better at developing better software.

I'm based in Copenhagen 📂, speak fluent Danish and English, and I'm excited to see how we can work together to make software better.

SKILLS

Microsoft Certified: Azure Developer Associate

PROGRAMMING LANGUAGES

Domain Driven Design

TECHNOLOGIES & PATTERNS

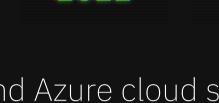

- Functional Programming ReSTful APIs
- Event-based systems
- .NET
- PostgreSQL
- AWS/GCP/Azure
- PaaS
- Kubernetes
- Containers
- Continuous Integration/Deployment Unit Testing/Property Based Testing
- Git Liberating Structures

SENIOR CONSULTANT

EMPLOYMENT HISTORY

Copenhagen Software/itm8 Bicep Mentoring

I work directly with clients on business-critical codebases mostly working with C# and Azure cloud solutions, as well as teaching developers how to work effectively with different tools and technologies.

NOW

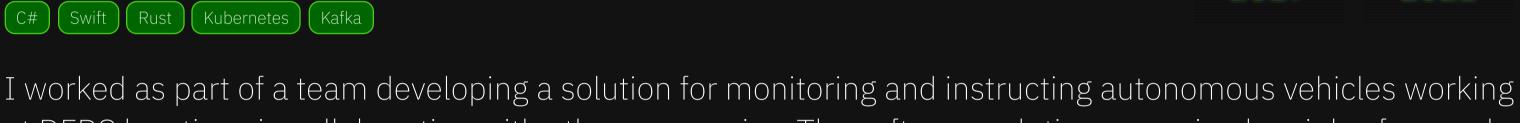

Internally, I run the recruiting process from writing job postings, to scheduling and running interviews with candidates. I worked as part of a team to define the interview process, and have developed documentation

and presentation materials for it. Additionally, I create informational video content on LinkedIn to improve employer branding and raise awareness of products and services - these videos have received significantly more engagement than other posts. As part of a directed effort to improve our own running of projects I have developed internal documentation to set standard procedures. To ensure that all team members have the opportunity to contribute I have

coordinated and facilitated meetings using Liberating Structures to maximize participation. CLOUD DEVELOPER NOV DEC DFDS 2019 2021

Swift Kubernetes

at DFDS locations in collaboration with other companies. The software solution comprised mainly of several

.NET core microservices running in Kubernetes and communicated primarily via Kafka events, the team and I had a strong focus on using DDD techniques to establish bounded contexts and make use of a ubiquitous language across the project. As well as the backend part of the solution, I also contributed to the frontend monitoring page developed using React. To facilitate demonstrations to stakeholders and to provide another option for testing the system, I developed an iOS app using SwiftUI and LocationKit that allowed me to simulate an autonomous vehicle operating in a

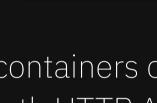

As part of internal knowledge sharing activities I was actively involved in the developer book club, reading and discussing a number of books focused on software development. I also made several contributions to the internally developed, open-source library for working with Kafka events - Dafda.

given area - this provided both automatic position updates over SignalR as well as user defined actions.

SOFTWARE DEVELOPER NOV OCT Storytel/Mofibo 2017 2019 F# C# Swift GCP

Originally working as a backend developer building microservices running in docker containers on Kubernetes on Google Cloud Platform. I developed several services in F# and C# - both HTTP APIs and

microservices in the backend, but also working on the iOS app (after teaching myself Swift) building functionality that made use of the new backend APIs (in Swift, using MVVM) and integrating it with some of the older parts of the codebase written in Objective C. As part of changing CI provider, I was extensively involved in improving the build automation for both backend services and the iOS app. As I introduced F# to the tech stack, I also worked heavily with training and mentoring other developers both to teach them a new programming language and a new approach to solving problems, but also helping to develop their existing skills. I was one of the co-creators of the dotnet template that allowed developers to get a new microservice up and running with standard configuration in either F# or C# with minimal effort. I

services consuming Pub/Sub messages. Over time I moved into a more "full stack" role continuing to develop

guidelines for how the API surface across many microservices should work. Additionally, I was involved in several recruitment processes, including reviewing applications and running both social and technical interviews leading to several good hires. DEVELOPER OCT APR

also was a member of the API Standards group within the tech department that worked towards creating

On the frontend team working with C#, MVC, WebAPI, and Angular JS to build a single page media streaming application.

On the backend team working on a range of APIs using: C#, F#, WebAPI and more to deliver a level 3 REST

Working in both frontend and backend teams to deliver a range of solutions for media streaming platforms.

between different services. Additionally involved in the development of a functional programming library for C# to allow faster, more

FsCheck; and a custom pure dependency injection setup and some use of Azure Service Bus to communicate

Eksponent 2013 2015 Projects included a large site upgrade from Sitecore 6 to 7, and a large media site built on ASP.NET MVC,

integrated with several data providers and funnelling data into a responsive, JavaScript based front end. Also

worked on developing internal tools including a bot for HipChat that provides integration with the project planning system.

DEVELOPER

SITECORE DEVELOPER GF Forsikring

SEP

DEC

2012

APR

Refactored the entire codebase for two separate solutions running on different versions of Sitecore into a unified solution, running on Sitecore 6.5, with a more clearly defined and logical structure. Involved in the implementation of TFS from the development team. Developed several landing pages and other smaller projects.

Worked on a variety of new or existing Sitecore solutions, often in collaboration with other developers. Gained

comprehensive knowledge of Sitecore and experience using a variety of technologies to meet goals across a range of scenarios within stringent deadlines.
